

The C 100 is a high quality, high resolution, multi-standard IP camera which can operate in both digital and analog environments (PAL or NTSC). It can be linked directly to a local Ethernet network or to the Internet, and simultaneously to an analog surveillance system via its video output connector.

It supports network transmission using M-JPEG/HTML together with H.323 or MPEG-4 (selectable by software upload) ensuring top quality live video transmission over IP networks. Camera control and picture display can be done via any standard web browser easily and user-friendly.

Optimum performance with full functionality are achieved when the C 100 is used in conjunction with a VCS software decoder (e.g. PROVIDo or VIDOS). The camera boasts full remote control and multicasting as well as intelligent alarm features for professional CCTV applications. Its bi-directional serial interface supports the remote control of external devices such as pan/tilt heads.
